

HARSHDEEP GROUP

Growth & Scale Blueprint (Full / Advanced)

World-class services, the 2026 AI engine, and the execution map for four brands

Aurra Hype • Designomics India • Loop In Events • Arihant Digital

Powered in-house by Arihant Digital

The advanced companion to the master operating workbook

Founder: Harshdeep | Bengaluru, India | July 2026

Contents

1. Executive Summary

This is the deep version of the plan. It benchmarks what world-class D2C, gifting, events and agency businesses run globally in 2026, then maps that best-in-class stack onto four brands you control. The four are Aurra Hype (streetwear apparel), Designomics India (personalised gifting and merch), Loop In Events (experiential), and Arihant Digital — your roughly ten-year-old agency, treated here as the fourth brand and the in-house engine that builds and markets the other three at cost, then sells that proven capability to outside clients.

The operating principle is simple and powerful: **build the machine once, point it at your own brands, and let the results become the sales pitch**. Everything below — the AI creative engine, the automation backbone, the chat funnels, the retention systems, the Founder Operating System — is chosen because leading brands already prove it works, and because you can deploy it in-house cheaper and faster than a competitor renting it from agencies.

Two naming issues are addressed up front: **Loop In Events shares its exact name and .com with an established Canadian planner (rebrand + trademark required)**, and “Aurra/Aura” is crowded in Indian apparel (distinctive, trademarked identity required). Both are Month-1, non-negotiable.

Read this document for the why, the sequence and the workflows. Use the companion workbook (Harshdeep_Group_Master_Stack_FULL.xlsx, 13 tabs) to execute, and the Founder Operating System playbook to run it all day-to-day.

2. The Group Thesis — One AI-Native Flywheel

Each asset lowers the cost or raises the value of the others, and AI compresses the whole loop:

- **Arihant Digital** builds the stores, runs paid + organic, sets up analytics and builds every automation — for all three brands, at internal cost.
- **Designomics** supplies design, print, packaging and merch to itself, Aurra Hype and Loop In.
- **Aurra Hype and Loop In** generate revenue, customers and content — which become Arihant's case studies.
- **AI (creative + agents)** multiplies output per person, so four brands run on a small core team.
- **External clients** fund more capability, which compounds back into the brands. That is the flywheel.

The structural edge: work outsiders pay 3–5x agency margin for is delivered to your brands at cost, and AI cuts production time by roughly 70%. That is what makes a four-brand build rational for one founder rather than reckless.

3. Business Deep-Dives (Advanced)

3.1 Aurra Hype — Streetwear / Hype Apparel

Win condition: desirable product, a drop/scarcity rhythm, community, and disciplined performance marketing with healthy unit economics. Copy the global streetwear playbook — limited drops, waitlists and early access, a VIP community channel, and resale-worthy hype — while running an Indian D2C engine underneath.

Advanced moves

Beyond the basics (fast Shopify store, catalog + reels, always-on Meta): add a drop calendar with waitlists and early-access; profit analytics (Triple Whale) and creative analytics (Motion) so you scale only true winners; an AI creative pipeline (Higgsfield UGC ads plus Runway/Veo hero films) to produce ad volume cheaply; server-side tracking (Meta CAPI via Stape) for accuracy post-iOS; on-site personalization and upsell (Rebuy/Nosto) to lift AOV; a VIP community on WhatsApp/Telegram and later Discord; and marketplace expansion to Amazon, Flipkart, then Myntra/Ajio once D2C is profitable. RTO/COD control (GoKwik) protects margin from day one.

3.2 Designomics India — Gifting, Merch & Corporate

The most naturally profitable brand: two demand engines (impulse/occasion D2C and contract corporate gifting) plus premium pricing from a strong customization experience. It doubles as the group's in-house design, print and packaging arm.

Advanced moves

Replatform off Wix onto Shopify with a real gift-box configurator (Kickflip/Zakeke); build a corporate-gifting sales motion (outbound, catalogs, quote-to-order, bulk GST invoicing, a HubSpot pipeline); use AI product imagery (Midjourney/Krea/Photoroom) to generate endless SKU visuals without shoots; run occasion-based automation (birthdays, festivals, anniversaries) that converts one-time gifters into recurring revenue; expand to Meesho (volume), Amazon gifting and optionally Etsy; and productise the workshops (DTF/patch kits) as both events and content. A Blinkit/Zepto pilot comes last, only on high-margin fast-movers.

3.3 Loop In Events — Experiential Rebrand First

Loop In Events is your experiential arm and, internally, the team that runs Aurra Hype launches and Designomics corporate experiences. Before scaling: **“Loop In Events” and loopinevents.com already belong to an established Canadian planner (Michelle Munro).** You are building equity on a name and web identity you do not own.

Rebrand + trademark (Month 1)

Choose a distinctive name; run the free IP India public search (wordmark + phonetic) across Class 41 (events/entertainment) and Class 35 (advertising/business); secure the matching .com/.in and social handles before announcing; then file the trademark via an IP attorney. Budget roughly ₹45,000–₹60,000 across the group's marks.

Advanced moves

A lead-gen site with portfolio and packages; local + LinkedIn lead-gen; a sales CRM and quote system; an event project/vendor-management system (Monday.com + Aisle Planner); filming every event as reels, case studies and testimonials; post-event feedback + testimonial + upsell automation; and eventually a signature owned event/IP (e.g. a streetwear-x-music night) that markets all four brands at once.

3.4 Arihant Digital — The Engine, Productised

Your unfair advantage and the fourth brand. It delivers web, performance, SEO/GEO, automation and analytics to the three brands at cost — and those brands become its portfolio. The strategic move is to productise: package clear offers (“AI-native growth”, “store build + launch”, “automation setup”, “AI creative studio”), lead

with the AI differentiators (Higgsfield creative, n8n/MCP automation) that most agencies can't match, and convert the brand wins into case studies with real before/after numbers. Then sell — outbound, inbound and referral — to D2C brands that look like your own, moving clients onto monthly retainers for predictable MRR. This is how the group funds and compounds itself.

4. In-House Engine & Cross-Sell Flywheel

Asset	Supplies to the group	Consumes from the group
Arihant Digital	Web, performance + organic marketing, SEO/GEO, analytics, all automations & AI	Real brands to showcase → external clients + MRR
Designomics	Branding, design, print, packaging, merch, gifting, workshops	Digital marketing, web, automation from Arihant
Aurra Hype	Streetwear product, drops, youth-culture content & audience	Web, ads, packaging, events, automation
Loop In Events	Live activations, launches, pop-ups, corporate experiences	Branding, web, marketing, merch/gifting

Cross-sell engine: a corporate client who books Loop In is offered Designomics gifting and Arihant digital; a Designomics corporate buyer is a warm events lead; Aurra Hype's audience is content fuel for all four. One relationship, multiple revenue lines, dramatically lower blended CAC.

5. The Full Operating Stack, by Domain

The complete online-and-offline map, upgraded with the advanced tools leading brands use. The workbook lists vendor, priority, phase and cost for every line; this is the orientation.

Domain	Owner	What runs here
Brand & Identity	In-house (Designomics) + IP attorney	Naming architecture, per-brand identities, trademark search & filing, brand-voice system used in AI prompts.
Website & E-commerce	In-house (Arihant)	Shopify (Aurra + Designomics off Wix, with a gift-box configurator), Loop In lead-gen site, landing-page builder (Replo), personalization (Rebuy/Nosto), A/B testing (VWO), CDN.
Content & Creative	Hybrid	Photography, a reels engine, a design subscription, and video repurposing (Opus/Descript) turning one shoot into 20 clips.
AI & Creative	In-house	The 2026 AI engine — see Section 6.
Performance Marketing	In-house (Arihant) + spend	Always-on Meta, Google Search/Shopping/PMax, LinkedIn for B2B, TikTok/Shorts/Pinterest later, with creative analytics (Motion) and profit analytics (Triple Whale).
CRM & Retention	In-house (Arihant) + SaaS	Klaviyo email/SMS, WhatsApp API broadcasts, loyalty & referral, a B2B sales CRM (HubSpot), and LTV/cohort analytics (Peel/Lifetimely).
Chat & Social Automation	In-house (Arihant)	IG comment-to-DM, WhatsApp bots, Telegram broadcasts, Facebook/Messenger, and an AI support chatbot — see Section 7.
AI & Automation	In-house (Arihant)	n8n/Make backbone, a Claude + MCP command layer, Gemini multimodal, and no-code agent builders (Gumloop/Lindy).
Sourcing & Manufacturing	Buy + Hybrid	Apparel units, DTG/DTF print, a merch/gifting supplier network, print-on-demand fallback, QC + tech-packs, and a global-sourcing option.
Packaging & Unboxing	In-house (Designomics)	Custom boxes/mailers, gift-box engine, inserts/QR, and a premium/sustainable line.
Inventory & Warehouse	Buy	One inventory system (Zoho/Unicommerce), barcode/SKU, a stockroom + WMS-lite, multi-channel sync, and AI demand forecasting.
Order & Logistics	Buy	Shipping aggregator, RTO/COD control (GoKwik), an OMS, one-tap UPI checkout, returns automation, and Bengaluru same-day.
Quick Commerce & Marketplaces	In-house (Arihant) + fees	Amazon & Flipkart, then Myntra/Ajio for Aurra; Meesho + Amazon gifting + optional Etsy for Designomics; a Blinkit/Zepto pilot; marketplace ads.
Influencer & PR	In-house + spend	Micro/mid seeding, a creator CRM (GRIN/Aspire), an affiliate program, and PR/media outreach.
Retail / Offline	Hybrid	Store POS + ops, the 12 July launch amplified, pop-ups/exhibitions/activations, and selective offline/OOH ads.
Finance & Compliance	Buy	Zoho Books/Tally + GST, payment gateway & reconciliation, a CA retainer, entity structuring, spend/expense control (Volopay/Jify), a unit-economics dashboard, and revenue-based inventory

Domain	Owner	What runs here
		financing later.
Legal & IP	Buy	Trademark portfolio, contracts & policies, and DPDP/data-privacy compliance.
HR & Team Ops	Hybrid	Phased hiring, payroll (RazorpayX/Keka), an SOP/training library, and contractor management.
Project & Internal Ops	In-house (Arihant)	One project system (Notion/ClickUp), an AI calendar (Motion), meeting-notes AI (Fathom/Fireflies), a DAM, and event project management.
Analytics & BI	In-house (Arihant)	GA4 + server-side, a group KPI dashboard, and session replay/heatmaps (Clarity/Hotjar).

6. The AI & Creative Engine (2026)

This is the layer that lets four brands run on a small team and lets Arihant out-produce bigger agencies. The workbook's "AI & Creative Stack" tab lists pricing; here is how each layer earns its place.

Video

Higgsfield is the workhorse for ad volume: its Hermes Agent takes a product URL and returns a ready UGC, CGI or cinematic ad for Meta/TikTok — testimonials, reviews and unboxings without filming. For premium brand and drop films, **Google Flow (Veo 3.1)** leads on overall quality and native audio, **Runway (Gen-4.5)** gives marketers the most control (keyframes, motion brush, character consistency), and **Kling 3.0** is the cheapest premium model for high-volume iteration. **Opus Clip / Descript** turn one long video into many captioned clips. (Note: Sora is being discontinued through 2026 — don't build on it.)

Image

Midjourney for concept and campaign imagery, **Krea/Leonardo** for fast real-time variations, **Ideogram** for text-in-image (posters, packaging art), and **Photoroom/Flair** for product backgrounds and on-model scenes — catalog-ready visuals without a full shoot.

Voice, avatars & copy

ElevenLabs for realistic multilingual voiceover, **HeyGen** for talking-avatar spokespeople and multilingual promos, and **ChatGPT Team + Claude** as the copy-and-strategy brains for scripts, descriptions, briefs and research.

Agents, MCP & Gemini

The command layer is **Claude + MCP** (Model Context Protocol — by 2026 an open standard with 10,000+ servers and 75+ official connectors). Via MCP, you can ask questions directly across your Shopify, ad accounts, CRM and Sheets, and run agentic operations (lead qualification, reporting, research). **Google Gemini** adds multimodal research and Workspace help, and **Gumloop/Lindy/Relay** let you build ops agents without code. This is the backbone of the Founder Operating System in Section 10.

7. Chat & Social Automation

India buys in chat. These funnels turn attention into orders automatically, across every surface:

Channel	What it automates
Instagram (ManyChat)	Comment-to-DM funnels (comment a keyword → auto-DM link/coupon), DM auto-reply + qualification with AI, and story-mention replies. Turns engagement into tracked sales.
WhatsApp (AiSensy + n8n)	Catalog browsing, ordering and payment inside WhatsApp; order-status updates; broadcasts for drops and offers; AI FAQ/sizing bot. India's highest-converting channel.
Telegram (Bot API)	VIP drop broadcasts and early-access for Aurra Hype's community; a low-cost owned hype channel.
Facebook / Messenger (ManyChat)	Lead-ad capture → CRM → auto-reply + retargeting handoff for Loop In and corporate gifting.
Site + omni (Gorgias AI)	One AI support agent across site chat, IG, WhatsApp and email — sizing, returns, order status — with human handoff.

8. Execution Map — Detailed Workflows

The stack only matters if it runs as connected workflows. Four core ones, each mostly automated:

Workflow A — New product to live everywhere

Add SKU in Shopify → AI generates product images (Potoroom/Krea) and copy (GPT/Claude) → Higgsfield drafts a UGC ad → inventory syncs to marketplaces (Unicommerce) with A+ copy → the drop is scheduled to WhatsApp/Telegram VIPs and the social calendar → ads go live and feed Motion/Triple Whale. One SKU, live across every channel, in minutes instead of days.

Workflow B — Visitor to repeat customer

Ad/organic → fast Shopify store (personalized, 1-tap UPI/COD) → abandoned-cart recovery on WhatsApp+email → order-status automations → post-delivery review + UGC request → loyalty/referral → win-back and occasion flows. RTO risk-flagging protects margin throughout.

Workflow C — Lead to booked event / corporate deal

Form/DM/ad lead → auto-logged in HubSpot with an instant intro + booking link → quote-to-order → event project + vendor management → delivery → post-event feedback, testimonial and upsell. Nothing dropped; every event becomes a case study.

Workflow D — Brand win to external client

Brand result → auto-built KPI report (Looker + GPT) → packaged as an Arihant case study → outbound/inbound → retainer. The three brands continuously manufacture Arihant's proof.

9. Founder Operating System (summary)

You cannot run four brands from your inbox. The Founder OS is a single command center — detailed in its own playbook. In brief: a live dashboard of every number across all four brands; an automated 8am WhatsApp/Telegram digest; an AI “chief of staff” you query via Claude + MCP; one work system (Notion); AI time-management (Motion); auto meeting-notes (Fathom); a unified comms hub; a weekly auto-scorecard; and one-tap async approvals for creative, spend and hires. The goal: run the group in about an hour of focused review a day, with AI and automations doing the rest.

10. 90-Day Roadmap

Month 1 — Foundation

Fix legal + brand + tech. Clean entities/GST; trademark searches and filings for all brands; rebrand Loop In and lock its name/domain/handles. Stand up the backbone — Shopify, domains, WhatsApp API, payments, analytics, inventory, accounting, the n8n automation layer and the AI creative stack — all connected. Get the content pod shooting, order branded packaging, and turn the 12 July Aurra Hype launch into content and PR. Switch on Meta to set a ROAS baseline.

Proof: trademarks filed, Loop In relaunched, all systems live, a strong store launch, first profitable campaigns.

Month 2 — Engine

Add Google/PMax and scale Aurra Hype's winners with creative + profit analytics; switch on retention flows; deploy 15+ automations including the chat funnels; launch Amazon + Flipkart; start Designomics corporate-gifting outbound; relaunch Loop In with lead-gen and a CRM and book its first events; stand up the Founder OS.

Proof: ROAS $\geq$ ~2.5, retention recovering revenue, live on two marketplaces, a corporate pipeline forming, 2–3 events booked.

Month 3 — Scale

Run a full drop calendar with influencer seeding and scaled budgets; pilot Designomics on quick-commerce and POD; run pop-ups/activations and chase PR; systemise with SOPs, first hires and dashboards; and package Arihant to win external clients.

Proof: a record revenue month, hero SKUs, a live q-comm pilot, offline activations and press, a documented growth curve with real CAC/AOV/ROAS/repeat numbers, and Arihant's first outside clients.

11. Budget (Aggressive Scenario)

Indicative monthly ranges; the workbook computes exact totals live. Because most delivery is in-house, spend concentrates in media, production and the tool stack rather than agency fees.

Bucket	Indicative monthly (₹)	Notes
Paid media (all brands)	₹3.5–5 L+	Largest line; scales with ROAS.
Content, creative & AI tools	₹80k–1.3 L	Photo/video, UGC, design + the AI creative/agent stack.
SaaS & automation stack	₹80k–1.2 L	Shopify, Klaviyo, WhatsApp, inventory, shipping, analytics, n8n, chat automation.
Influencer / seeding	₹1 L+	Mostly Aurra Hype; product-gifting lowers cash cost.
Ops, finance, legal, HR	₹40k–70k	CA, legal/IP, payroll as team grows.
One-time setup	₹5–7 L	Trademarks, entity setup, replatforming, warehouse/POS, packaging tooling, launch.

12. World-Class Benchmarks

Where possible, adopt the proven default instead of inventing one. The workbook's Benchmarks tab maps each function to the best-in-class stack and your move; the essentials: Shopify + Klaviyo + Triple Whale as the D2C core; Motion for creative analytics; Higgsfield/Runway/Veco for AI creative; ManyChat + WhatsApp for chat; Gorgias AI for support; GRIN/Aspire for influencers; n8n + Claude MCP for automation; Notion + Motion + Fathom for founder operations.

13. KPIs, Risks & Immediate Actions

The numbers that matter

Track per brand on one dashboard: revenue and growth curve; ROAS and CAC (falling); AOV and contribution margin (true profit after COGS/ads/RTO); repeat-rate and LTV; RTO rate (falling); and pipeline proof (corporate deals, events booked, Arihant's first clients).

On the target: "crore-crore in three months" is the right ambition and direction, but from a thin base, ninety days is realistically about building the machine and proving a steep, documented growth curve with healthy unit economics — which is exactly what makes the group fundable and scalable.

Key risks

Risk	Mitigation
Loop In name/domain clash	Rebrand + trademark in Month 1, while change is cheap.
Founder over-extension (4 brands)	The Founder OS, automations and phased roadmap remove manual load; hire in M2-M3.
Apparel RTO / COD losses	Risk-flagging + COD verification; push prepaid incentives.
Thin quick-commerce margins	Treat Blinkit/Zepto as an M3 pilot on high-margin SKUs only; D2C stays priority.
AI-tool sprawl / cost	Adopt tools by phase; the workbook sequences P0→P3; review spend weekly in the Founder OS.

This week

- Run IP India searches for a new Loop In name + Aurra/Designomics marks; lock the new Loop In name, domain and handles.
- Engage a CA + IP attorney: confirm structure/GST and start filings.
- Stand up the backbone: Shopify + WhatsApp API + payments + GA4 + n8n, connected; set up the AI creative accounts (Higgsfield, Midjourney, Claude, ElevenLabs).
- Brief the content pod; shoot Aurra Hype's catalog; plan the 12 July launch as a filmed, PR-able event (run by Loop In).
- Design + order branded packaging; finalise apparel/DTG and merch suppliers.
- Switch on Meta for Aurra Hype to set the ROAS baseline; connect Motion + Triple Whale.
